

We need to provide a commit message in English for a GitHub repository. The user will upload this entire chat to a GitHub repository. The subfolder is "Цифровой дарвинизм" (Digital Darwinism). The PDF file is "Классификация скоростей" (Classification of Speeds). Need a short commit description (up to 50 characters) and a full commit description. The user wants both in English. So I'll craft a short summary line (max 50 chars) and a more detailed body for the commit message. The chat covers a scientific investigation of the Lonely Runner Hypothesis using a model called Ti, development of a systematic classification of speed sets, a determination key, and a detailed species description. The PDF presumably contains the classification and key.

Short description: "Add classification key and speed taxonomy for Ti model" (maybe under 50 chars). Count: "Add classification key and speed taxonomy for Ti model" - let's count: A(1)d(2)d(3) (space) c(4)l(5)a(6)s(7)s(8)i(9)f(10)i(11)c(12)a(13)t(14)i(15)o(16)n(17) (space) k(18)e(19)y(20) (space) a(21)n(22)d(23) (space) s(24)p(25)e(26)e(27)d(28) (space) t(29)a(30)x(31)o(32)n(33)o(34)m(35)y(36) (space) f(37)o(38)r(39) (space) T(40)i(41) (space) m(42)o(43)d(44)e(45)l(46) -> 46 characters. So fits. Could also be "Add speed set classification and determination key". 50 characters: "Add speed set classification and determination key" - A(1)d(2)d(3) (space) s(4)p(5)e(6)e(7)d(8) (space) s(9)e(10)t(11) (space) c(12)l(13)a(14)s(15)s(16)i(17)f(18)i(19)c(20)a(21)t(22)i(23)o(24)n(25) (space) a(26)n(27)d(28) (space) d(29)e(30)t(31)e(32)r(33)m(34)i(35)n(36)a(37)t(38)i(39)o(40)n(41) (space) k(42)e(43)y(44) -> 44 chars. So I'll pick the latter, it's clear. The full description can explain the addition of the taxonomy, key, and detailed species analysis for the "Цифровой дарвинизм" project.

Commit message body can be something like:

"Introduce a systematic classification of speed sets (Fenestrata/Punctata, Phyla, Classes, Orders) based on resonance window existence and measure, along with a determination key for the Ti model. Includes detailed morphological and ecological description of the species Hemiptera polyanthera modestus ({1,5,7,11} for N=5) within the Digital Darwinism framework."

I'll present the short commit title and then the full description.

****Короткое описание (commit title, ≤ 50 знаков):****

` Add speed set classification and determination key `

****Полное описание (commit body):****

` ` `

Introduce a systematic taxonomic framework for sets of integer speeds within the Ti model of the Lonely Runner Hypothesis.

- Hierarchical classification (Regnum: Fenestrata / Punctata, Phylum, Classis, Ordo, Familia) based on existence, number, and measure of continuous loneliness windows.
 - Deterministic key to classify any speed set and compute a lower bound for total loneliness time over one period.
 - Detailed morphological / ecological description of the species
- *Hemiptera polyanthera modestus* ($\{1, 5, 7, 11\}$, $N=5$) as a worked example of the "Digital Darwinism" approach.
